

Year 8 Geography Curriculum Plan

Unit	Core		Hinterland		NC Coverage	Assessment	Whole Education Opportunities
	Knowledge	Skills	Knowledge	Skills			
<p>Africa</p> <ul style="list-style-type: none"> Urban Resources Tectonics Economy Coasts Weather Ecosystems Development Rivers 	<ul style="list-style-type: none"> The coast is shaped by a number of physical processes. A growing percentage of the world's population lives in urban areas Urban growth creates opportunities and challenges for cities in LICs and NEEs Hot desert ecosystems have a range of distinctive characteristics Areas on the fringe of hot deserts are at risk of desertification There are global variations in economic development and quality of life Various strategies exist for reducing the global development gap Some LICs and NEEs are experiencing rapid economic development which leads to significant social, environmental and cultural change Natural hazards pose major risks to people and property Earthquakes and volcanic eruptions are the result of physical processes Demand for energy resources is rising globally but supply can be insecure, which may lead to conflict Different strategies can be used to increase energy supply 	<p>Cartographic skills</p> <p>Atlas maps</p> <ul style="list-style-type: none"> recognise and describe distributions and patterns of both human and physical features maps based on global and other scales may be used and students may be asked to identify and describe significant features of the physical and human landscape on them <p>OS Maps</p> <ul style="list-style-type: none"> use and interpret OS maps at a range of scales, including 1:50 000 and 1:25 000 and other maps appropriate to the topic use and understand coordinates – four and six-figure grid references use and understand scale, distance and direction – measure straight and curved line distances using a variety of scales use and understand gradient, contour and spot height identify basic landscape features and describe their characteristics from map evidence describe human and physical landscapes (landforms, natural vegetation, land-use and settlement) and geographical phenomena from photographs 	<ul style="list-style-type: none"> Population change can be of varied levels even within the same country. Sub-surface processes which lead to volcanic eruptions. Neo-colonialism. 	<ul style="list-style-type: none"> Interpretation and analysis of data Social understanding of the impact of poverty (empathy) The link between the analysis of large scale biomes and local area 	<ul style="list-style-type: none"> Locational knowledge Place knowledge Human geography Physical geography Geographical skills 	<ul style="list-style-type: none"> Formal end of unit/topic assessment covering all units Skills based questions and practice developing cartographic and graphic knowledge Formative exam questions within lessons, focusing on developing skills using key command words. Peer, self and whole class marking / DIRT Online knowledge checks using Teams 	<ul style="list-style-type: none"> Links to Science in relation to geology Links to Maths in utilising different graphical skills and interpretation of data. Links to English in structuring answers to questions. Links to Languages in understanding the variety in Europe.
<p>Asia</p> <ul style="list-style-type: none"> Urban Resources Economy Weather Coasts Ecosystems Development Climate change Glaciers 	<ul style="list-style-type: none"> Sea level change influences coasts on different timescales Coastal flooding is a significant and increasing risk for some coastlines. Demand for energy resources is rising globally but supply can be insecure, which may lead to conflict Different strategies can be used to increase energy supply There are global variations in economic development and quality of life Some LICs and NEEs are experiencing rapid economic development which leads to significant social, environmental and cultural change Climate change is the result of natural and human factors, and has a range of effects Managing climate change involves both mitigation (reducing causes) and adaptation (responding to change). 	<ul style="list-style-type: none"> draw sketches from photographs label and annotate diagrams, maps, graphs, sketches and photographs. <p>Maps in association with photographs</p> <ul style="list-style-type: none"> be able to compare maps sketch maps: draw, label, understand and interpret photographs: use and interpret ground, aerial and satellite photographs describe human and physical landscapes (landforms, natural vegetation, land-use and settlement) and geographical phenomena from photographs draw sketches from photographs label and annotate diagrams, maps, graphs, sketches and photographs. <p>Graphical skills</p>	<ul style="list-style-type: none"> All urban areas vary around the world, knowledge of LIC/NEE/HIC cities restricted to cities studied Perception of the bigger connection of urban areas through globalisation. Impacts of HEP can be long-term and impact things other than energy security. 	<ul style="list-style-type: none"> Connection of ideas to wider geography Social understanding of the impact of poverty (empathy) 	<ul style="list-style-type: none"> Locational knowledge Place knowledge Human geography Physical geography Geographical skills 	<ul style="list-style-type: none"> Formal end of unit/topic assessment covering all units Skills based questions and practice developing cartographic and graphic knowledge Formative exam questions within lessons, focusing on developing skills using key command words. Peer, self and whole class marking / DIRT Online knowledge checks using Teams 	<ul style="list-style-type: none"> Links to Maths in utilising different graphical skills and interpretation of data. Links to English in structuring answers to questions. Links to Philosophy on the social ethics of exploiting the world for profit/development

	<ul style="list-style-type: none"> • Monsoons develop as a result of particular physical conditions • Deforestation has economic and environmental impacts • Tropical rainforests need to be managed to be sustainable • Distinctive glacial landforms result from different physical processes 	<ul style="list-style-type: none"> • select and construct appropriate graphs and charts to present data, using appropriate scales • suggest an appropriate form of graphical representation for the data provided • plot information on graphs when axes and scales are provided • interpret and extract information from different types of maps, graphs and charts, including population pyramids, choropleth maps, flow-line maps, dispersion graphs. 					
<p>Oceania & Antarctica</p> <ul style="list-style-type: none"> • Urban • Development • Ecosystems • Economy • Weather • Climate change • Coasts 	<ul style="list-style-type: none"> • Coastal flooding is a significant and increasing risk for some coastlines. • Distinctive coastal landforms are the result of rock type, structure and physical processes. • Different management strategies can be used to protect coastlines from the effects of physical processes • Urban change in cities leads to a variety of social, economic and environmental opportunities and challenges • Urban sustainability requires management of resources and transport • Food, water and energy are fundamental to human development • Demand for energy resources is rising globally but supply can be insecure, which may lead to conflict • Climate change is the result of natural and human factors, and has a range of effects • Managing climate change involves both mitigation (reducing causes) and adaptation (responding to change). 	<p><u>Formulate enquiry and argument</u> <u>identify questions and sequences of enquiry</u></p> <ul style="list-style-type: none"> • write descriptively, analytically and critically • communicate their ideas effectively • develop an extended written argument • draw well-evidenced and informed conclusions about geographical questions and issues. 	<ul style="list-style-type: none"> • The geopolitical issues surrounding the division of Antarctica. • Regeneration can be viewed differently by various stakeholders. 	<ul style="list-style-type: none"> • Connection of ideas to wider geography • The link between the analysis of large scale biomes and local area 	<ul style="list-style-type: none"> • Locational knowledge • Place knowledge • Human geography • Physical geography • Geographical skills 	<ul style="list-style-type: none"> • Formal end of unit/topic assessment covering all units • Skills based questions and practice developing cartographic and graphic knowledge • Formative exam questions within lessons, focusing on developing skills using key command words. • Peer, self and whole class marking / DIRT • Online knowledge checks using Teams 	<ul style="list-style-type: none"> • Links to Science in understanding components and interactions of ecosystems • Links to Science in knowledge of adaptations of both flora and fauna within different ecosystems • Links to Maths in utilising different graphical skills and interpretation of data. • Links to English in structuring answers to questions. • Links to Languages in understanding the variety in South America.
